

Medisoft® Clinical with Bright Note Technology™

With the incentives designed to encourage the adoption of electronic health records (EHRs) — whether pay-for-performance, Medicare, Medicaid or other incentives built into the Economic Stimulus Plan — the decision to implement an EHR has never been more important.

Now with Bright Note Technology™ the decision to purchase an EHR has never been easier.

One Touch Sets Everything in Motion

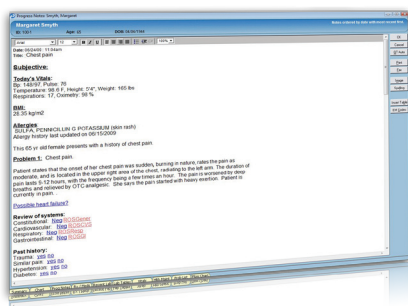

Medisoft® Clinical with Bright Note Technology uses dynamic processing power to instantaneously populate patient data across the entire chart from a single note. Bright Note Technology's intuitive design helps physicians feel more comfortable with using an EHR to care for their patients.

It all starts with one note. Using their preferred charting style, physicians and other providers can capture data in a single screen note. Then, with one touch, searchable patient data instantly synchronizes across the complete chart.

Medisoft Clinical with Bright Note Technology improves efficiency and enhances clinical reporting and health outcomes.

Single Note Synchronization

Behind the technology, dot codes help complete the single screen note and then — automatically — synchronize data to the appropriate folders within the electronic chart. This single note-centric approach means less time dealing with the EHR and more time caring for patients.

1. Single Screen Charting makes it easy for physicians to complete the note using their preferred input method.

2. With one touch, data is instantly synchronized to appropriate folders within the chart.

3. Searchable patient data is automatically generated to help quickly produce meaningful clinical care reporting.
